## FA201-OHCP

Strong Base Anion, Macroporous  
Uniform Mesh Size  
OH<sup>-</sup> form

Condensate Polishing Grade

Felite™ FA201-OHCP is a polisher grade, Type I macroporous strong base anion resin, supplied in the hydroxide form.

Felite™ FA201-OHCP is a uniform particle size resin specifically designed for use in deep bed condensate polishers and optimized both for low pressure loss and for perfect separation from the polisher grade cation components.

Felite™ FA201-OHCP is intended for use in high flow rate deep bed condensate polishing applications when paired with either Felite™ FC100-HCP or Felite™ FC110-HCP.

## PERFORMANCE

The operating capacity depends on several factors such as the water analysis and the level of regeneration. The data to calculate the operating capacity and the ionic leakage with co-flow regeneration are given in the Engineering Data Sheets.

## LIMITS OF USE

Felite™ FA201 resin is suitable for industrial uses. For other specific applications such as pharmaceutical, food processing or potable water applications, it is recommended that all potential users seek advice from Felite™ Resin Technology in order to determine the best resin choice and optimum operating conditions.

## HYDRAULIC CHARACTERISTICS

Figure 1 shows the pressure drop data for Felite™ FA201 resin, as a function of service flow rate and water temperature. Figure 2 shows the bed expansion of Felite™ FA201 resin, as a function of backwash flow rate and water temperature. Pressure drop data are valid at the start of the service run with clear water and a correctly classified bed.
